O. C. WALLER, MANAGER

WE LEAD WHEN QUALITY COMES FIRST

Judsonia, Ark.

To My Many Friends and Patrons:

It is with great pleasure that we send you this Circular quoting you rock bottom prices on quality Strawberry Plants.

We indeed wish to thank those who have been favoring us with their orders for the past ten years. As their orders are repeated year after year is assured proof that our prices and plants have met their entire expectation. Beginning with 200 acres, we have added to this, until we now have 1,000 acres of land, of which there is more than 55 acres of fine strawberry plants. This year we have been favored with plenty of rain, and the result is we have millions of vigorous young plants.

To those wanting plants, will say you cannot place your order where you can buy better plants than we are offering you. Our judgment along this line is backed by many years of actual experience in the strawberry field. Our experience in backing plants for the past ten years assures you that you are getting first-class work along this line. The many testimonials we have on file, of which we will print a few, is proof that WALLER BROTHERS' plants are all that can be expected by any one.

Again thanking you one and all for the business you have favored us with, and asking a continuance of same, we are

Yours very truly,
WALLER BROTHERS.

General Information

Prices in this folder set aside all former quotations. When ordering plants, use order sheet, and write your name and address plainly.

Payments

Must be made in advance. Either express or postoffice money order, bank draft or registered letter. Or, if you prefer, we will send your plants C. O. D., provided you send 25 per cent of full value of order.

Block of Our Klondike

Our Guarantee

We guarantee our stock true to name, with the understanding that should it prove otherwise we will refund the money or replace it with other stock which is true to name. But under no circumstances are we liable for more than the first cost of the plants.

Digging Our Plants

Our plants are dug as ordered, nicely trimmed and tied in bunches of twenty-six and twenty-seven and counted as twenty-five. This insures you of a good count. Plants are packed in light crates with plenty of moss, and guaranteed to reach you in good shape, either by mail or express.

Time of Filling Orders

We will begin filling orders not later than the 1st of November, and possibly as early as the 20th of October. For spring delivery, we will ship until April 15th, and guarantee safe arrival. After this date they go at your risk. You will not lose anything by placing your order early.

Estimate Weight of Plants

It is impossible to give the correct weight of plants, as some varieties are much larger than others, and as spring advances the plants become heavier. Our experience has taught us that it is safe to calculate on from twenty to twenty-five pounds to the thousand.

Care of Plants When Received

If the ground is not in a fit condition for the planting of them, a very easy method can be used to keep them. Take each variety, a bunch at a time, cut string, and spread roots very thinly along the side of a shallow furrow, then cover roots of plants with dirt not higher than the crown of the plant. Give partial shade, and if ground is dry, water roots only.

These Letters Are on File in Our Office —Read Them

The following letter was written by one of our customers from Iowa. Read it, and profit by so doing.

O. C. Waller & Bros.,
Judsonia, Ark.
Gentlemen:

Two years ago I had my first experience in strawberry growing. The results pleased me exceedingly. I found that my two rows of berries were worth more in dollars than all the other twenty-two rows of truck. This autumn I bought a farm and paid at the rate of \$950.00 an acre for it. Don't get excited, for there was only one-half acre in the farm. The following spring the whole lot was set to berries. I cultivated these berries myself; never had a horse plow in the field. That summer it was very dry indeed. Hot? I guess it was hot. But I never quit cultivating. Every evening after 6 p. m., when we locked up the store, found me doing something in the field with the hoe or rake.

In October the rain came, and the plants drank deep and took new life. They made large crowns and for thirty days grew fat. I had planted them in four-foot rows with plants fourteen to eighteen inches apart in the rows. They were never allowed to make a matted row more than one foot wide. Every single plant that got over the line got its head chopped off as soon as discovered. It was this method that saved my plants and made the big crop in 1919. The idle ground between the rows held a reserve of moisture to feed the plants. Then in early December we hauled in several loads of coarse manure. This was put between the rows, and not on the plants. When the ground was well frozen, and the rain and the weather had washed out this manure somewhat, I took a rake and raked some of the coarsest over the rows; just enough to barely cover them.

When April, 1919, came along this field was very beautiful. When the blooms came, the sight was simply marvelous, and when the berries began to ripen, there seemed to be so many we were bewildered. It seemed like we could never pick them. The rows were now two feet wide instead of one. From this little field we picked from June 1st to 21st, 250 twenty-four-quat crates. This does not include our winter supply put up in cans. These berries sold readily at \$5.00 to \$7.00 a crate. In fact, we never kept a single crate over night, and we could have sold many more. Just use your pencil and see what this half acre did for me. I figured I worked one hour a day for seventy-five or eighty days—say eighty hours, although I think seventy would be nearer right. But it was not work. It was nothing more than play after working in the store the bigger part of the day. This berry business is fun, so much so that I had to get another farm. I had this to do in order to keep busy.

I have more acreage this year and am better prepared, and I expect an even larger crop than I had last year. It seems to me there is nothing one can do in a small way to make so much easy money as in raising berries. The crop is sure, or at least much surer than any crop I know of. The work to be done is but little, but that little must be done if satisfactory results are to be obtained.

Yours very truly,
G. W. D.

Field of Missionary

O. C. Waller & Bros.,
Judsonia, Ark.
Gentlemen:

I have turned all the trade to you that I could from this locality and from other places along this railroad, for I knew my friends would get satisfaction when they dealt with you. I want a few thousand Aroma plants. Please quote prices. There will be over one hundred acres set to strawberries within the next year, and I am organizing an association at a neighboring town, where 150 acres will be set next spring. I will be in a position to turn you a big business. I beg to remain,

Harrison, Ark.,
April 4th, 1920.

Yours very truly, A. M.

Waller Bros.,
Judsonia, Ark.
Gentlemen:

Inclosed find check for \$16.75. The plants were fine, and I thank you.

Cove, Ark.,
June 6th, 1920.

Yours very truly, J. M. D.

Waller Bros.,
Judsonia, Ark.
Gentlemen:

Order No. 4865, for 10,000 Aroma plants, has arrived in fine shape. If you can send me 5,000 more at once, please do so.

Noel, Mo.,
April 10th, 1920.

Yours truly,
J. A. T.

O. C. Waller & Bros.,
Judsonia, Ark.

El Dorado Springs, Mo.,
April 14th, 1920.

Dear Sirs:

We have received the strawberry plants, and we give you our many thanks for the extra ones sent us. We received them in fine shape and in a short time.

Yours very truly, MRS. G. A. H.

O. C. Waller & Bros.,
Judsonia, Ark.
Dear Sirs:

Portland, Tenn.,
January 23d, 1920.

I want to buy Aroma plants in large lots for the Association here. Will want them in March. I like your plants, and want best prices on large orders.

Yours very truly, W. E.

Mrs. Sue Stockwell,
Sealy, Texas.

Bellville, Texas,
October 18th, 1919.

Dear Madam:

Answering your letter relative to strawberry plants, will have to say that I am not able to furnish them, due to the dry weather we had last spring.

The best people I know of for good plants are O. C. Waller & Bros., of Judsonia, Ark. If you send to them you are sure of receiving the very best plants. I would order the Klondike.

Yours very truly,
C. R. J.

Waller Bros.,
Judsonia, Ark.

New Port, Ark.,
September 9th, 1919.

Dear Sirs:

Please send me another catalogue. The plants you shipped to Little Rock for me were the finest plants I ever saw. Will send you a large order for this fall planting.

Send prices to Mr. L. L. E., of Kerrs, Ark. He wants plants.

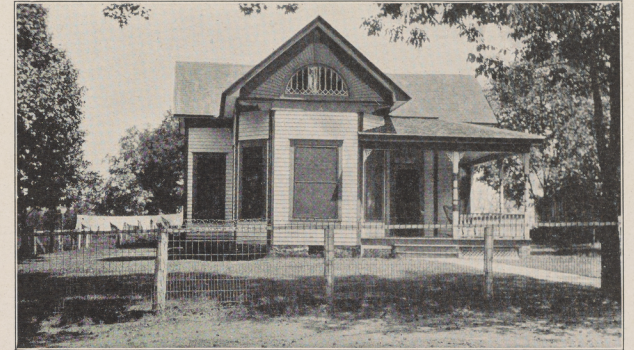

Very truly yours, C. G. J.

O. C. Waller & Bros.,
Judsonia, Ark.
Gentlemen:

Monroe, La.,
December 24th, 1919.

The last shipment of your plants received, and we are certainly well pleased with your plants.

Yours truly,
MRS. T. Mc.

The Home of O. C. Waller

Mr. O. C. Waller,
Judsonia, Ark.
Dear Sir:

Blue Jacket, Okla.,
July 1st, 1919.

What will be your best prices on Gandy plants for this fall. We have bought quite a lot of you, and can say that you give us more satisfaction than any other plant dealer we ever dealt with. Please let me hear from you in the very near future.

Yours very truly,
N. H.

O. C. Waller Bros.,
Judsonia, Ark.
Gentlemen:

Channel City, Tex.,
August 11th, 1911.

I am again interested in strawberry plants; wish to purchase several thousand, so send prices.

Have bought plants of you several years ago, and the plants were very satisfactory.

Yours for business, J. J. S.

O. C. Waller Bros.,
Judsonia, Ark.
Gentlemen:

Coyle, Okla.,
April 15th, 1920.

The plants I have been buying of you have indeed been very satisfactory. I told Mr. Thornley to place his order with you. I told him you had the best plants in America. He had been buying his plants from the North, and paying much more than you are asking.

Yours very truly,

O. C. Waller & Bros.,
Judsonia, Ark.
Gentlemen:

Navasota, Tex.,
June 28th, 1920.

Two years ago I bought a few hundred Klondike plants from you, but last year being a very dry year, I did not get any berries at all, but managed by watering a few of the old plants, to keep them alive until last fall, and from these old plants I secured 2,000 young plants, which I put out last October. From these 2,000 plants I picked this season 960 Pittsburg pints, which I sold at the patch at 25 cents per pint.

I commenced picking on the 26th of March, and picked berries every day until yesterday, making a little over three months that I picked berries from this patch. I do consider it remarkable that I got so many berries from so few plants, and the season lasting over three months.

I am giving you this information for what it is worth to you, as I consider you have a wonderful plant in this Improved Klondike. Wishing you continued success, I am,

Yours very truly, J. H. P.

Dear Friends:

Are not these letters convincing evidence that our plants are as good as money can buy, REGARDLESS OF PRICE? As already stated these letters are genuine and we have enough of such to print two or three circulars the size of this one. Such letters as these do me good. I am always glad to hear from pleased customers as it gives me encouragement to do even more to please the many new ones that are being added to our list year after year. You will make no mistake when you place your order with WALLER BROTHERS.

Description of Varieties — O. C. Waller & Brothers' Strawberries

Klondike

(Per) If there is a better berry than this variety, the people have not found it out. This variety is, without a doubt, more extensively planted than any other one variety, especially throughout the South. Plants are very hardy and will withstand the dry, hot weather as well as any. We have more than twenty-five acres in this variety alone, and would be glad to have you figure with us on large lots of plants. We are in a position to fill your orders, large or small, and at the same time with as good plants as money will buy. Look at some of our photographs of this variety.

Missionary

(Per) It was thought by many that this variety would take the place of the Klondike, while we do not see it that way. Fruit is medium size and very firm, resembling the Aroma in shape and color, while the berry is not as large. A good plant maker, and free from any rust. Season same as the Klondike.

Excelsior

(Per) An old variety that leads them all for earliness, and one that has stood the test for more than twenty years. Berries are of a dark red color, medium in size. Plant growth good.

Aroma

(Per) A late and very popular berry in all sections. I have not yet found the late berry that has the demand this one has. While I believe that there are some of the new varieties that are its equal, or, in fact, its superior, however, it does well both north and south. Many of the growers here, as well as elsewhere, will grow no other variety for a late berry. The berry is very firm, and you will find none that will stand shipping better than this variety. We have an unusually large supply of plants, and will be glad to quote you special prices on large orders.

Senator Dunlap

(Per) A favorite with most Northern growers, and is well known wherever strawberries are grown. It is a great plant maker, and for this reason should not be planted too close together, as plants will become too thick. Its fruit is a bright red, a good shipper, and of an excellent quality. Mid-season.

Warfield

(Imp) An old variety, but a good one, just the same; especially in northern states. We would recommend that you plant Dunlap with this variety, in order to fertilize them; then you are sure to receive a bumper crop of second early berries. Fruit is regular shape, dark red, and a splendid shipper.

Evening Star

(Per) In this variety you will find a good, all around late berry. I much prefer them to the Gandy, as they are much more productive, and are not subject to rust like the Gandy. Their season is the same as the Gandy; also their fruit resembles that variety so much that you can scarcely separate them. The plants are large, and hold their fruit well off the ground. To the man who is looking for a good, late berry he will find it in this variety.

Lady Thompson

(Per) This berry at one time had the lead in all Southern states, and is still grown very extensively. One very important reason for this is that the berry is a good drouth resister. The hot, dry weather seems to have but little effect on it. It is, as a rule, very productive.

Gandy

(Per) Originated by Mr. Gandy, of Pennsylvania, more than thirty years ago, and is yet being planted extensively. This variety does best when planted with some other late berry. The Aroma is a good one for this.

St. Louis

(Per) There is only one thing that keeps this berry from taking first place as an extra early berry, and that is, that it is too soft; however, we have had many flattering reports from the north, where it seems to do better than in the south. To any one that is wanting to grow the largest early strawberry grown for the nearby markets, you need not hunt for anything that will, in size or earliness, turn down this variety.

Champion K

This is a new variety and one we like very well. It is only three or four days later than the Excelsior, and much more productive. The plant's growth is good, and the fruit is as large as that of the Klondike. You will make no mistake in planting this variety in place of the Excelsior.

Lucky Strike Everbearing Variety

The description found below is of this variety, which was sent us by an eastern nurseryman of whom we bought some plants, paying him \$1.00 for each plant. We have a few thousand plants to furnish to our customers at 25 cents each, or five plants for \$1.00, postpaid. We can say this for this variety. We planted some two acres of the Progressive and Superb varieties, and the dry weather killed all of them, while the LUCKY STRIKE stood it fine. We consider this one great point in favor of them.

Description as follows: Lucky Strike is a chance seedling—parentage unknown. This is the variety we have all been looking for, and we have named it Lucky Strike. While we have been growing the Everbearing varieties as fast as they have been introduced, from the Pan-American up, in the Lucky Strike we have found the Everbearing variety without a fault. We had expected that some day some one would find a better everbearer than the Progressive, but we did not expect to find it so soon. Nor did we expect to find one that would surpass the Progressive by so many good points as the Lucky Strike has done. We want it fully understood that there is no fake in any way, shape or form, regarding the introduction of the Lucky Strike. That we consider it to excell all other everbearing varieties in every way, shape, or form, is but putting it mildly. We give here a few of its good points. In plant growth, the Lucky Strike has never been equaled by any other everbearing variety. Plants large, stalky, without a blemish, and makes an abundance of them. As the new runner plant forms, the fruit bud starts to open, and by time plant is rooted the fruit is showing, and we have counted six or eight berries of extra large size on one new runner plant when the plant was not over four weeks old. On one mother plant the writer counted September the 1st one hundred and forty-eight green and ripe berries. This was a strong, robust plant, and had produced at least fifty new runner plants this season, nearly every one of which were bearing fruit at the time. Size of the fruit is the largest of the everbearing yet seen. Color, rich dark red to the center, firm, and quality good enough for a king. We consider this the greatest bargain we have ever offered our customers, and we assure you you will find it so. Price, 25 cents each, or five for \$1.00, or twelve for \$2.00.

Price List of Strawberry Plants

	Per 100	Per 250	Per 500	Per 1,000
Klondike	\$0.50	\$1.00	\$1.85	\$3.50

O. C. Waller & Brothers, Judsonia, Arkansas

MRS. O. C. WALLER'S
PRICE LIST
OF THE
WORLD'S MOST PROFITABLE
AND
BEAUTIFUL FOWL
ANCONA

The Story of the Ancona

NATURE'S most bountiful gift—S. C. Anconas. In this little circular we aim to give the reader a brief idea of the origin, characteristics, advantages, etc., of the Single Comb ANCONA, and the reason of its being the most popular egg producing variety in the world.

ORIGIN OF THE BREED.

Ancona is the common fowl of Italy, and they derive their name from their native province of Ancona, on the eastern coast, where they have been bred for many years.

They were brought to the United States from England, and in 1895, were admitted into the American Standard of Perfection. There are only two varieties of Anconas, Single and Rose comb.

Ancona Characteristics

Ancona is one of the hardest breeds ever introduced. Their eggs are large and white, and contests have proven that they not only produce more eggs than other breeds, but their eggs are much larger, which will command a higher market price. Little chicks grow very fast and often begin laying at four months of age where properly cared for, and their active habits enable them to keep themselves comfortable even in unfavorable weather. They do well in confinement or on range, and require less feed than any of their competitors.

The ideal Ancona color is black, and there should be a white tip on every fifth feather.

The face and wattles are of a bright red, with the face free from white. Ear lobes are white or a creamy white, although some red will be found in the ear lobes of nearly all flocks.

The legs should be yellow, or yellow mottled with black. In size they are slightly larger than the Leghorn. Matured females weigh four to five pounds. The males, five to six pounds, and sometimes more.

Their true shape resembles the Leghorn very much, although their body is somewhat longer. This feature gives them the advantage as egg producers.

And Here It Is

At the Bangor, Maine, poultry show, a feature was the egg-laying contest, participated in by 15 pens of Orpingtons, Rhode Island Reds, Wyandottes, Leghorns, Plymouth Rocks and Anconas. Anconas won first and second prizes, \$15.00 and \$10.00, also highest on number of eggs, quality of eggs, and quality of birds. Anconas are turning the trick all over the country, even the snowy zero winters do not retard Ancona egg production. It's Anconas for eggs every time, and all the time.

In a contest held by the New York State School of Agriculture at Morrisville, N. Y., where all leading breeds of poultry were present, William C. Sanctuary, the gentleman in charge of the poultry, writes for January, 1920, as follows: "The five Anconas in the Morrisville contest won both the pen and individual prize ribbons again this month, producing 169 eggs. Their nearest competitor was a pen of Leghorns with 106 eggs to their credit."

Regarding Purebred Poultry

Right now the need of the people is more and better poultry. There are thousands of people who have flocks of mongrels which no doubt are not paying their way. These flocks could be greatly improved in their egg-laying qualities by purchasing a male bird of high scoring egg strain. At the Kansas Agricultural Station mongrels laid 98 eggs. The first cross with a pedigreed male produced pullets that laid 132 eggs. The next cross gave pullets that laid 150 eggs in the year. The third cross pullets from a pure sire resulted in a yield of 156, and in the lot was one pullet that laid 248, one 250 and one 262 in her pullet year.

DEAR READER, Is your flock of poultry nothing more than a bunch of mongrels, all sizes, shapes and colors? If so, it is a fact that they are not paying for the food they eat. It is an evident fact that the hen which fails to lay 100 eggs a year or near this amount is worth nothing to her owner. You can readily see that if your flock only amounts to 12 hens which are mongrels and their record is only 98 eggs each, that you are losing 34 eggs per year from each of your hens by not adding to your flock a purebred male bird. Thirty-four eggs each for the 12 hens amounts to 408 eggs, or 34 dozen. These at 35 cents per dozen amount to \$11.90 on your flock of 12 hens the first year. The second year shows an increase of 52 eggs per hen, which amounts to 52 dozen on the 12 hens. These eggs at 35 cents per dozen amount to \$18.20. Add \$11.20, first year's

profit, and you have \$30.10. You can buy a purebred male bird for about one-third the profit you have made. This leaves you a profit of some \$20. This is no big amount of money to make in two years, but isn't it better to save it than throw it away? Further, you have added to your flock beauty. You have brought your poultry near to one color, and who is it that would not prefer to see a flock of one size, shape and color, rather than all sizes and colors?

THE HEN THAT LAYS IS THE HEN THAT PAYS

The world's record for early laying is held by Ancona pullet No. 385, bred and owned by the Oklahoma Agricultural College in 1914. She laid at the age of 107 days, a part of which time she spent in a demonstration train, traveling 10,000 miles. Many other Ancona pullets have made records very close to the above.

AN ANCONA PULLET HOLDS THE RECORD OF LAYING 331 EGGS IN 365 CONSECUTIVE DAYS.

Why You Should Breed Anconas

From the January, 1915, report of the Missouri Egg-Laying Contest, Mountain Grove, Mo., certified to by C. T. Patterson, in charge of the Experimental and Extension work:

"100 pounds of feed produced 300 eggs when fed to ANCONAS; 268 eggs when fed to Leghorns; 251 eggs from Wyandottes; 230 eggs from Orpingtons; 225 eggs from Campines; 203 from Minorcas; 201 eggs from Rhode Island Reds; 188 eggs from Plymouth Rocks; 179 from Langshans.

"Furthermore, when all the eggs were weighed it showed that the Anconas laid the largest egg of all the breeds tested. And the Anconas laid the largest per cent of eggs during December, January, February, March, April and May, when prices are the highest

both for market and hatching."

The foregoing report is from a summary for the year and is an average, not particular performance of certain birds or pens.

ANCONAS IN BRITISH COLUMBIA CONTEST

Under date of March 17, 1920, J. R. Terry, of the Department of Agriculture, and Chief Poultry Instructor, Victoria, B. C., gave the following official figures from their eighth egg-laying contest.

ANCONAS produced eggs at a cost of 25.6c per dozen. The profit per bird on Anconas was \$4.81; on Wyandottes, \$4.12; on Rhode Island Reds, \$3.57; on Plymouth Rocks, \$3.25.

Ancona eggs averaged in weight 26.3 ounces per dozen; Rhode Island Reds, 26.1 ounces; Leghorns, 25.1 ounces; Wyandottes, 24.7 ounces; Rocks, 23.8.

My Experience with Poultry

I have been growing some purebred poultry for several years and during this time I have tried out many of the leading breeds, such as Barred and White Rocks, the Silver Laced, Partridge and Golden Wyandottes, Single Comb Rhode Island Reds, White and Buff Leghorns. Of all the above breeds I can truthfully say I much prefer the ANCONA both for eggs and beauty.

A careful record kept of 10 S. C. Ancona pullets from February 1 to May 31, shows the following: Total production of eggs for the four months, 741; cost of feed, \$13.60. The eggs were sold on the market at 40c per dozen, bringing \$24.70, clearing \$11.10 for the four months on ten unselected Ancona pullets. This record is the result of our experiments to find a breed suitable for both Fancier and Farmer.

At the rate of the above we can clear \$3,615.00 on 1,000 hens per year, selling eggs at market price. When the fancy trade is reached many dollars can be added to this.

Now don't you think the S. C. Ancona is a farmers' as well as a fanciers' fowl?

IN SECURING OUR EGGS

In buying our eggs for hatching purposes we selected from some of the best pens in AMERICA, paying as high as \$15 per setting for many of them. With these high priced eggs and the experience I have had as a breeder of purebred poultry, I believe I have as nice a bunch of S. C. ANCONAS as you can buy anywhere. You will make no mistake in buying your ANCONAS from our stock, either from our free range or pen No. 1.

Price List of Eggs

PEN No. 1—Headed by cocks of 331 egg strain. I believe every hen in this pen is a good exhibition bird. Their mates are fine birds all the way through. I am indeed very proud of this pen of birds, and I believe they are as good as can be found, regardless of price. If you want beautiful birds and layers combined you will not be disappointed in making your choice from this pen.

I am making an unusually low price on these eggs—\$5 per 15, or \$20 for 100.

FREE RANGE MATING—A large flock of select pullets of the same general blood lines as our pen mating, many nice specimens of color and type. We have discarded all small or off colored birds and you will find this free range stock to be the equal of many pen matings.

You will make no mistake when you order these eggs—\$2 per 15, or \$10 per 100.

PRICES AFTER MAY FIRST.

Pen No. 1—\$12 per 100, or \$3 per 15.

Free Range—\$7 per 100, or \$1.50 per 15.

We have on hand a few very fine male birds that we are offering at great bargain prices, and only those who order first will be able to secure their birds from me. Any of these birds are guaranteed to please you, having many compliments passed on them for their fine shape and color. Price each \$6.00.
